● COMPANY & POSITIONING

Software engineering built around real operations.

A product approach combining technical excellence, business understanding and field realities.

Based in Choisy-le-Roi, France, ALMEFRA TECHNOLOGY publishes and develops application software, SaaS products, websites, intranets and tailored digital systems. We combine product strategy, programming, cloud architecture, maintenance and IT training to turn complex processes into reliable operational tools.

OUR CONVICTION

**Certify. Verify. Trace.
Supervise. Decide with
confidence.**

7

Selected product

Multilingual
experience

**SaaS +
PWA**

Modern architecture

DRC-first

Field-ready design

Operational reliability

Security by design

Field adoption

Controlled scalability

CAPABILITIES

From product strategy to production operations.

End-to-end support to design, deploy and continuously improve dependable digital assets.

CS

01

Custom software development

Business applications, institutional platforms, information systems and measurable operational workflows.

SA

02

SaaS product engineering

Multi-tenant solutions with subscriptions, dashboards, RBAC, audit trails and scalable architecture.

WD

03

Websites & digital systems

High-performance corporate websites, web applications, intranets and connected digital services.

OF

04

Offline-first platforms

PWAs for weak connectivity, reliable synchronization, mobility and continuous field operations.

CL

05

Cloud, DevOps & maintenance

CI/CD, deployment, monitoring, backups, security and continuous application maintenance.

CT

06

Consulting & IT training

Software architecture, digital transformation guidance and practical team enablement.

● STRATEGIC REFERENCE

A traceability platform designed for the DRC mining ecosystem.

ALMEFRA TECHNOLOGY × YALELO TECH

ALMEFRA TECHNOLOGY worked with YALELO TECH on a mining traceability and due diligence platform. This reference combines product strategy, field engineering, mapping, compliance workflows, audit trails and executive dashboards in one institutional-grade solution.

DEMONSTRATED CAPABILITY

Connect field evidence to confident decisions.

01

Capture

Data and trusted evidence from the field.

02

Verify

Identity, QR/NFC and business controls.

03

Trace

A secure history of operational events.

04

Supervise

Mapping and operational alerts.

05

Decide

Dashboards and compliance reporting.

Offline-first PWA

Continuity of use in environments with weak or intermittent connectivity.

SHA-256 audit

Event history designed to reinforce the integrity of operational evidence.

Executive control

A consolidated view of operations, controls and decision indicators.

● **PRODUCT PORTFOLIO • 01/02**

Seven platforms. Concrete operational challenges.

Products designed around traceability, trust, control and continuity of operations.

Mining compliance

Traceability & Due Diligence OS

Mining due diligence, field capture, QR/NFC proof, SHA-256 event history, dashboards and compliance reporting.

Digital health

AFYA-CD

A modular national suite with patient and facility registries, interoperability, offline-first workflows and executive analytics.

Public administration

e-CorrHydro

Institutional correspondence management: centralization, traceability, configurable deadlines, notifications and supervision.

Trusted payments

BONGISA

A multi-tenant SaaS for collections, proof, reconciliation and reminders across schools, rent, health, associations and merchant deposits.

● **PRODUCT PORTFOLIO • 02/02**

Secure access, field missions and trusted documents.

Three complementary platforms supported by a pragmatic, maintainable technical foundation.

Protocol & access

ProtocolOS

Appointments, visitors, badges and access control for organizations requiring identity, perimeter and auditability.

Field operations

FieldOps

Mission control from dispatch to closure: teams, evidence, incidents, validation, reporting and operational supervision.

Trusted documents

VeriSeal Cloud

Document verification and sealing for certificates, QR checks, access management and secure audit trails.

Production technology foundation

A pragmatic stack designed for SEO, performance, maintainability and fast deployment.

● A WORD FROM THE CEO / CTO

Turning complexity into dependable products.

**Alex Simisi
Nta**

CEO / CTO —
ALMEFRA
TECHNOLOGY

“

ALMEFRA TECHNOLOGY was created with a clear conviction: institutions and businesses need serious, secure and beautifully engineered platforms designed for real field realities and economic ambition. Our mission is to transform complex problems into reliable products that decision-makers can trust, teams can use and organizations can scale.

ALEX SIMISI NTA
CEO / CTO — ALMEFRA TECHNOLOGY

Trust. Control. Execution.

A PRODUCT VISION GROUNDED IN REALITY

● OUR DELIVERY MODEL

From strategic intent to a dependable product.

01

Discover

Clarify the problem, users, constraints, risks and measurable success indicators.

02

Design

Shape the product, workflows, data, security boundaries and premium experience.

03

Build

Deliver testable increments with quality controls, automation and transparent progress.

04

Operate

Deploy, monitor, maintain and continuously evolve the platform.

Let's discuss what you want to digitize, secure or scale.

We help define a clear technical path, a realistic MVP scope and a deployment strategy adapted to your context.
